& Total Management

5MP monochrome display for diagnostic imaging with excellent image quality control features

A 5MP display best suited for digital mammography and other advanced applications. Loaded with a high luminance, high contrast LCD panel, it delivers excellent image quality with a luminance uniformity compensation feature and a capability to display 2048 shades of gray simultaneously. It also comes with a hardware-based pivoting function for fast image display in portrait orientation.

ME551i2 is FDA 510(k) cleared as a digital mammography display.
